Tips on Navigating the Codebook

This document is a detailed codebook that describes each variable in the Medicare fee-for-service (FFS) claims research files. We have included several ways for users to quickly find the information they need:

- A complete listing of all files' variables, in alphabetical order based on their SAS variable names.
- Individual entries for each variable contain a short description of the variable, the possible values for the variable, and, in many cases, comments discussing the variable construction and use.

We have included hyperlinks throughout the codebook to make it easier for users to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents will take you to the detailed description for that variable.
- From the individual variable page, clicking on the ^Back to TOC^ link after each variable description will take you back to the Table of Contents.

Table of Contents

This section of the codebook contains a list of all variables in alphabetical order based on the SAS variable name.

COMMENT: Effective with Version 'J,' the field was expanded on the NCH record to 2 bytes, with this expansion, the NCH will no longer use the character values to represent the official two-byte values sent in by NCH since 4/2002. During the Version J conversion, all character values were converted to the two-byte values.

On 4/1/2002, this field was expanded to two bytes to accommodate new values. The NCH Nearline file did not expand the current 1-byte field but instituted a crosswalk of the 2-byte field to the 1-byte character value.

CARR_LINE_RX_NUM

DESCRIPTION: The number used to identify the prescription order number for drugs and biologicals purchased through the competitive acquisition program (CAP).

SHORT NAME: CARRXNUM

LONG NAME: CARR_LINE_RX_NUM

TYPE: CHAR

LENGTH: 30

SOURCE: NCH

VALUES: —

COMMENT: The prescription order number consists of:

- Vendor ID number (positions 1–4)
- HCPCS code (positions 5–9)
- Vendor controlled prescription number (positions 10–30)

The Medicare Modernization Act (MMA) required CMS to implement a competitive acquisition program (CAP) for Part B drugs and biologicals not paid on a cost or PPS basis. Physicians have a choice between buying and billing these drugs under the average sales price (ASP) or obtaining these drugs from an approved CAP vendor. The prescription number is needed to identify which claims were submitted for CAP drugs and their administration.

CLM_E_POA_IND_SW12

LABEL: Claim Diagnosis E Code Present on Admission (POA) Indicator Code

DESCRIPTION: The present on admission (POA) indicator code associated with the diagnosis E codes (principal and secondary).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. The objective was to eventually not pay hospitals more if the patient acquired a condition (e.g., infection) during the admission. This present on admission (POA) field is used to indicate whether the diagnosis was present on admission.

Medicare claims did not indicate whether a diagnosis was POA until 2011.

X = Denotes the end of the POA indicators in special data processing situations that may be identified by CMS in the future.

Z = Denotes the end of the POA indicators

COMMENT: Medicare claims did not indicate whether a diagnosis was POA until 2011.

CLM_FAC_TYPE_CD

LABEL: Claim Facility Type Code

DESCRIPTION: The type of facility.

SHORT NAME: FAC_TYPE

LONG NAME: CLM_FAC_TYPE_CD

TYPE: CHAR

LENGTH: 1

SOURCE: NCH

VALUES:

- 1 = Hospital
- 2 = Skilled nursing facility (SNF)
- 3 = Home health agency (HHA)
- 4 = Religious Non-medical (hospital)
- 6 = Intermediate Care (IMC)
- 7 = Clinic services or hospital-based renal dialysis facility
- 8 = Ambulatory Surgery Center (ASC) or other special facility (e.g., hospice)

COMMENT: This field, in combination with the service classification type code (variable called CLM_SRVC_CLSFCTN_TYPE_CD) indicates the “type of bill” for an institutional claim. Many different types of services can be billed on a Part A or Part B institutional claim and knowing the type of bill helps to distinguish them.

The type of bill is the concatenation of two variables:

Facility type (CLM_FAC_TYPE_CD)

Service classification type (CLM_SRVC_CLSFCTN_TYPE_CD).

[^ Back to TOC ^](#)

CLM_FREQ_CD

LABEL: Claim Frequency Code

DESCRIPTION: The third digit of the type of bill (TOB3) submitted on an institutional claim record to indicate the sequence of a claim in the beneficiary's current episode of care

SHORT NAME: FREQ_CD

LONG NAME: CLM_FREQ_CD

TYPE: CHAR

LENGTH: 1

SOURCE: NCH

VALUES:

0 = Non-payment/zero claims	H = CMS generated adjustment claim
1 = Admit thru discharge claim	I = Misc. adjustment claim (e.g., initiated by intermediary or QIO)
2 = Interim — first claim	J = Other adjustment request
3 = Interim — continuing claim	K = OIG Initiated Adjustment Claim
4 = Interim — last claim	M = Medicare secondary payer (MSP) adjustment
5 = Late charge(s) only claim	P = Adjustment required by QIO
7 = Replacement of prior claim	Q = Claim Submitted for Reconsideration Outside of Timely Limits
8 = Void/cancel prior claim	
9 = Final claim (for HH PPS = process as a debit/credit to RAP claim)	
G = Common Working File (NCH) generated adjustment claim	

COMMENT: This field can be used in determining the “type of bill” for an institutional claim. Often type of bill consists of a combination of two variables: the facility type code (variable called CLM_FAC_TYPE_CD) and the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD). This variable serves as the optional third component of bill type, and it is helpful for distinguishing between final, interim, or RAP (request for anticipated payment) claims — which is particularly helpful if you receive claims that are not “final action.”

Many different types of services can be billed on a Part A or Part B institutional claim and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of three variables: the facility type (CLM_FAC_TYPE_CD), the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD), and the claim frequency code (CLM_FREQ_CD).

VALUES: —

COMMENT: For home health prospective payment system (PPS) claims, the 'from' date and the 'thru' date on the RAP (request for anticipated payment) initial claim must always match.

The "from" date on the claim may not always represent the first date of services, particularly for home health or hospice care. To obtain the date corresponding with the onset of services (or admission date) use the admission date from the claim (variable called CLM_ADMSN_DT for IP, SNF, and HH — and variable called CLM_HOSPC_START_DT_ID for hospice claims).

For Part B non-institutional (carrier and DME) services, this variable corresponds with the earliest of any of the line-item level dates (e.g., in the line file, it is the first CLM_FROM_DT for any line on the claim). It is almost always the same as the CLM_THRU_DT; exception is for DME claims — where some services are billed in advance.

CLM_FULL_STD_PYMT_AMT

LABEL: Claim Full Standard Payment Amount

DESCRIPTION: This variable is the standard payment amount for long-term care hospitals (LTCH) under the Medicare prospective payment system (PPS), which is based on the MS-LTC-DRG.

This amount does not include any applicable outlier payment amount.

SHORT NAME: CLM_FULL_STD_PYMT_AMT

COMMENT: Applies only to inpatient (LTCH) claims. This field is new in October 2015.

For a LTCH PPS claim, only one of four fields will be populated (CLM_SITE_NTRL_PYMT_CST_AMT, CLM_SITE_NTRL_PYMT_IPPS_AMT, CLM_FULL_STD_PYMT_AMT, or CLM_SS_OUTLIER_STD_PYMT_AMT) as they are mutually exclusive (i.e., only one of the four fields will have a non-zero value). The field with the non-zero value is included in the Claim Payment Amount field.

This percentage reduction is applied to the base operating DRG amount (defined as the wage adjusted DRG payment plus new technology add-on payments).

Additional information is available on the CMS "Hospital Value-Based Purchasing" website.

The actual dollar amount of the adjustment that applied to the claim is found in the variable called CLM_HRR_ADJSTMT_PMT_AMT.

Effective 4/1/2002, this field was also expanded to two bytes to accommodate new values. The NCH Nearline file did not expand the current 1-byte field but instituted a crosswalk of the 2-byte field to the 1-byte character value. Reference table of code for the crosswalk.

NOTE: Effective with Version ‘J,’ the field has been expanded on the NCH claim to 2 bytes. With this expansion the NCH will no longer use the character values to represent the official two-byte values being sent in by NCH since 4/2002.

During the Version ‘J’ conversion, all character values were converted to the two-byte values.

COMMENT:	Bundling payment for services that patients receive across a single episode of care, such as heart bypass surgery or a hip replacement, is one way to encourage doctors, hospitals, and other health care providers to work together to better coordinate care for patients. Under the Model 4 BPCI pilot, CMS will reimburse qualified acute care hospitals a blended payment for hospital inpatient care and physician services connected with a single episode of care. This will occur in association with inpatient hospital claims that the BPCI participating hospital will bill to their jurisdictional A/B MAC as type of bill 11X claims.

CLM_PASS_THRU_PER_DIEM_AMT

LABEL: Claim Pass Thru Per Diem Amount

DESCRIPTION: Medicare establishes a daily payment amount to reimburse IPPS hospitals for certain “pass-through” expenses, such as capital-related costs, direct medical education costs, kidney acquisition costs for hospitals that are renal transplant centers, and bad debts. This variable is the daily payment rate for pass-through expenses. It is not included in the CLM_PMT_AMT field.

To determine the total of the pass-through payments for a hospitalization, this field should be multiplied by the claim Medicare utilization day count (CLM_UTLZTN_DAY_CNT). Then, total Medicare payments for a hospitalization claim can be determined by summing this product and the CLM_PMT_AMT field.

DESCRIPTION: The Medicare claim payment amount.

For hospital services, this amount does not include the claim pass-through per diem payments made by Medicare. To obtain the total amount paid by Medicare for the claim, the pass-through amount (which is the daily per diem amount) must be multiplied by the number of Medicare-covered days (e.g., multiply the CLM_PASS_THRU_PER_DIEM_AMT by the CLM_UTLZTN_DAY_CNT), and then added to the claim payment amount (this field).

For non-hospital services (SNF, home health, hospice, and hospital outpatient) and for other non-institutional services (Carrier and DME), this variable equals the total actual Medicare payment amount, and pass-through amounts do not apply.

For Part B non-institutional services (Carrier and DME), this variable equals the sum of all the line item-level Medicare payments (variable called the LINE_NCH_PMT_AMT).

LABEL: Claim Diagnosis Code Present on Admission (POA) Indicator Code

DESCRIPTION: The present on admission (POA) indicator code associated with the diagnosis codes (principal and secondary).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. The objective was to eventually not pay hospitals more if the patient acquired a condition (e.g., infection) during the admission.

This present on admission (POA) field is used to indicate whether the diagnosis was present on admission.

Medicare claims did not indicate whether a diagnosis was POA until 2011.

The present on admission indicators for the diagnosis E codes are stored in the present on admission diagnosis E trailer.

CLM_PPS_CPTL_DRG_WT_NUM

LABEL: Claim PPS Capital DRG Weight Number

DESCRIPTION: The number used to determine a transfer adjusted case mix index for capital, under the prospective payment system (PPS). The number is determined by multiplying the Diagnosis Related Group Code (DRG) weight times the discharge fraction.

Medicare assigns a weight to each DRG to reflect the average cost of caring for patients with the DRG compared to the average of all types of Medicare cases. This variable reflects the weight that is applied to the base payment amount.

The DRG weights in this variable reflect adjustments due to patient characteristics and factors related to the stay. For example, payments are reduced for certain short stay transfers or where patients are discharged to post-acute care. Therefore, for a given DRG, the weight in this field may vary.

SHORT NAME: THRU_DT

LONG NAME: CLM_THRU_DT

TYPE: DATE

LENGTH: 8

SOURCE: NCH

VALUES: —

COMMENT: For home health prospective payment system (PPS) claims, the 'from' date and the 'thru' date on the RAP (Request for Anticipated Payment) initial claim match.

The "thru" date on the claim may not always represent the last date of services, particularly for home health or hospice care. To obtain the date corresponding with the cessation of services (or discharge date) use the discharge date from the claim (variable called NCH_BENE_DSCHRG_DT; **NOTE:** this variable is not available for home health claims).

For Part B non-institutional (Carrier and DME) services, this variable corresponds with the latest of any of the line-item level dates (i.e., in the Line File, it is the last CLM_THRU_DT for any line on the claim). It is almost always the same as the CLM_FROM_DT; exception is for DME claims — where some services are billed in advance.

CLM_VBP_ADJSTMT_PCT

LABEL: Claim VBP Adjustment Percent

DESCRIPTION: Under the Hospital Value Based Purchasing (HVBP) program, an adjustment is made to the base operating DRG amount for certain inpatient prospective payment system (IPPS) hospitals — based on their Total Performance Score (TPS).

SHORT NAME: CLM_VBP_ADJSTMT_PCT

LONG NAME: CLM_VBP_ADJSTMT_PCT

COMMENT: This initiative began in fourth quarter of 2013 (i.e., beginning of federal fiscal year 14 [FY14]).

This field was new in 2013 and is null/missing for all previous years.

The HVBP applies only to subsection (d) IPPS hospitals. There is a variable that indicates whether the hospital was excluded from HVBP (reference CLM_VBP_PRTCPNT_IND_CD). This percentage reduction is applied to the base operating DRG amount, depending on their TPS (which is the Value Based Purchasing Score), as required by the Affordable Care Act (ACA). The percentages change each FY.

Additional information is available on the CMS "Hospital Value-Based Purchasing" website.

The actual dollar amount of the adjustment that applied to the claim is found in the variable called CLM_VBP_ADJSTMT_PMT_AMT.

HCPCS_CD

LABEL: Healthcare Common Procedure Coding System (HCPCS) Code

DESCRIPTION: The Healthcare Common Procedure Coding System (HCPCS) is a collection of codes that represent procedures, supplies, products, and services which may be provided to Medicare beneficiaries and to individuals enrolled in private health insurance programs. The codes are divided into three levels, or groups, as described below (in COMMENT).

In the Institutional Claim Revenue Center Files, this variable can indicate the specific case-mix grouping that Medicare used to pay for skilled nursing facility (SNF), home health, or inpatient rehabilitation facility (IRF) services (reference NOTE 2 in COMMENT section below).

LONG NAME: HCPCS_CD

TYPE: CHAR

COMMENT: Level I

Codes and descriptors copyrighted by the American Medical Association's Current Procedural Terminology, Fourth Edition (CPT-4). These are 5-position numeric codes representing physician and non-physician services.

NOTE 1: CPT-4 codes including both long and short descriptions shall be used in accordance with the CMS/AMA agreement. Any other use violates the AMA copyright.

Level II

Includes codes and descriptors copyrighted by the American Dental Association's Current Dental Terminology, Fifth Edition (CDT-5). These are five-position alpha-numeric codes comprising the D series. All other level II codes and descriptors are approved and maintained jointly by the alpha-numeric editorial panel (consisting of CMS, the Health Insurance Association of America, and the Blue Cross and Blue Shield Association). These are 5-position alpha-numeric codes representing primarily items and non-physician services that are not represented in the level I codes.

Level III

Codes and descriptors developed by Medicare carriers (currently known as Medicare Administrative Contractors; MACs) for use at the local (MAC) level. These are five-position alpha-numeric codes in the W, X, Y or Z series representing physician and non-physician services that are not represented in the level I or level II codes.

NOTE 2: This field may contain information regarding case-mix grouping that Medicare used to pay for SNF, home health, or IRF services. These groupings are sometimes known as Health Insurance prospective payment system (HIPPS) codes.

This field will contain a HIPPS code if the revenue center code (REV_CNTR) equals 0022 for SNF care, 0023 for home health, or 0024 for IRF care.

For home health claims, please also reference the revenue center APC/HIPPS code variable (REV_CNTR_APC_HIPPS_CD).

COMMENT: For ICD-9 diagnosis codes, this is a 3–5 digit numeric or alpha/numeric value; it can include leading zeros. On October 1, 2015, the conversion from the 9th version of the International Classification of Diseases (ICD-9-CM) to version 10 (ICD-10-CM) occurred.

Starting in 2011, with version J of the NCH claim layout, institutional claims can have up to 25 diagnosis codes (previously only 11 were accommodated), and the non-institutional claims can have up to 12 diagnosis codes (previously only up to 8).

The lower the number, the more important the diagnosis in the patient treatment/billing (i.e., ICD_DGNS_CD1 is considered the primary diagnosis).

DESCRIPTION: This field is used by CWF claims processing for the purpose of bypassing its normal MSP editing that would otherwise apply for ongoing responsibility for medicals (ORM) or worker's compensation Medicare Set-Aside Arrangements (WCMSA). Normally, CWF does not allow a secondary payment on MSP involving ORM or WCMSA, so the residual payment indicator is used to allow CWF to make an exception to its normal routine.

COMMENT: On an institutional claim, this is the NPI number assigned to uniquely identify the institutional provider certified by Medicare to provide services to the beneficiary.

On the carrier claim, this is line-level information regarding the performing physician (Short Name = PRGRPNPI); it is the NPI of the group practice, where the performing physician is part of that group.

COMMENT: CMS has determined that dual provider identifiers (old legacy numbers and new NPI) must be available in the NCH. After the 5/2007 NPI implementation, the standard system maintainers will add the legacy number to the claim when it is adjudicated. We will continue to receive the OSCAR provider number and any currently issued UPINs. Effective May 2007, no new UPINs (legacy numbers) will be generated for new physicians (Part B and outpatient claims), so there will only be NPIs sent into the NCH for those physicians.

It is a standard amount, without the geographical payment adjustments and some of the other add-on payments that actually go to the hospitals.

This field is new in October 2014. This field applied only to inpatient claims until July 2018, when it also applied to home health agency (HHA) claims. For HHA claims, this field was initially called FINL_STD_AMT in the CCW RIF.

NOTE: An additional field is available that further adjusts the standard Medicare Payment amount by applying additional standardization requirements (e.g., sequestration). Refer to variable called the final standardized amount (FINL_STD_AMT).

PRVDR_NUM (Institutional claim)

LABEL: Provider Number

DESCRIPTION: This variable is the provider identification number of the institutional provider certified by Medicare to provide services to the beneficiary. This is the CMS Certification Number (CCN).

The first two digits indicate the state where the provider is located. As two-digit state codes have been exhausted, CMS has implemented a two-position alpha-numeric coding system for state Codes (reference the NOTE in the VALUES below). The middle two characters indicate the type of provider; and the last two digits are used as a counter for the number of providers within that state and type of provider (i.e., this is a unique but not necessarily sequential number).

Hospital

V = Alcohol drug unit (prior to 10/87
only)

R = Rehabilitation Unit in Critical
Access Hospital

W = Swing-Bed Hospital Designation for

T = Rehabilitation unit (excluded from

U = Swing-Bed Hospital Designation for
Short-Term Hospitals

There is also a special numbering system for assigning emergency hospital identification numbers (non-participating hospitals).

The sixth position of the provider number is as follows:

E = Non-federal emergency hospital

F = Federal emergency hospital

COMMENT: Effective October 1, 2007, the OSCAR Provider Number has been renamed the CMS Certification Number (CCN). The name was changed to avoid confusion with the National Provider Identifier (NPI). The CCN will continue to play a critical role in verifying that a provider has been Medicare certified and for what type of services.

Refer to CCW Technical Guidance document: "Getting Started with Medicare Data" for additional information regarding service setting classifications.

If you want additional information about the institutional provider, the quarterly CMS Provider of Services (POS) file contains dozens of variables that describe the characteristics of the provider. This file is updated quarterly, and effective May 2014 is available for free online from the CMS website (2005–current).

RC_MODEL_REIMBRSMT_AMT

LABEL: Revenue Center Model Reimbursement Amount

DESCRIPTION: This field is used to identify the “net reimbursement amount” of what Medicare would have paid for the global budget service reflected at the line level, from a hospital participating in the particular model.

SHORT NAME: RC_PTNT_ADD_ON_PYMT_AMT

LONG NAME: RC_PTNT_ADD_ON_PYMT_AMT

LENGTH: 12

SOURCE: NCH

COMMENT: This field is new in January 2020. This field only applies to Part A claims.

For participating hospitals within the PA model all inpatient and outpatient services (facility/technical services) are considered a part of the model/global budget services. Basically, all the services for participating hospitals would be global except for CAH Method II (where the bill type is 85X) claims lines with revenue codes 096x, 097x or 098x. The CAH Method II professional services (REV codes 096x, 097x or 098x) process as they do today, they have nothing to do with the model.

REV_CNTR_1ST_ANSI_CD

LABEL: Revenue Center 1st ANSI Code

DESCRIPTION: The first code used to identify the detailed reason an adjustment was made (e.g., reason for denial or reducing payment).

SHORT NAME: REVANSI1

LONG NAME: REV_CNTR_1ST_ANSI_CD

TYPE: CHAR

LENGTH: 5

SOURCE: NCH

VALUES: This code set is an external code set maintained by X12 <https://x12.org/codes>

*****EXPLANATION OF CLAIM ADJUSTMENT GROUP CODES. List may not be complete or current*****

*****POSITIONS 1 and 2 OF ANSI CODE*****

CO = Contractual Obligations — this group code should be used when a contractual agreement between the payer and payee, or a regulatory requirement, resulted in an adjustment. Generally, these adjustments are considered a write-off for the provider and are not billed to the patient

CR = Corrections and Reversals — this group code should be used for correcting a prior claim. It applies when there is a change to a previously adjudicated claim

OA = Other Adjustments — this group code should be used when no other group code applies to the adjustment

PI = Payer Initiated Reductions — this group code should be used when, in the opinion of the payer, the adjustment is not the responsibility of the patient, but there is no supporting contract between the provider and the payer (i.e., medical review or professional review organization adjustments)

PR = Patient Responsibility — this group should be used when the adjustment represents an amount that should be billed to the patient or insured. This group would typically be used for deductible and copay adjustments

*****Claim Adjustment Reason Codes*****

REV_CNTR_APC_HIPPS_CD

LABEL: Revenue Center APC or HIPPS Code

DESCRIPTION: This field contains one of two potential pieces of data; the Ambulatory Payment Classification (APC) code or the Health Insurance prospective payment system (HIPPS) code, which corresponds with the revenue center line for the claim.

The APC codes are used as the basis for payment for outpatient prospective payment (OPPS) service (e.g., Part B institutional). Additional information regarding OPPS is available on the CMS website (reference: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>).

Some Part A claim types (e.g., home health and SNF) use resource groupings, which are similar to case-mix groups, as the basis for payment (e.g., HHRG, SNF RUGs).

For home health (HH) claims, when the revenue center code (variable called REV_CNTR) is 0023, the HHRG is located in this field and is a HIPPS code. This field is only meaningful for a HH claim when CMS determines the claim should be paid using a different HIPPS code than the one submitted by the provider. When this happens, the revised HIPPS code (the one used for payment purposes) appears in this field and the original HIPPS code submitted by the provider remains in the HCPCS_CD field. Otherwise, this variable will always be null or have a value of "00000" for HH revenue center records.

The resource utilization group for the particular revenue center is located in the data field called the APC or HIPPS code variable.

The APC is a four-byte field.

The HIPPS code is a five-byte field (such as 1AFKS).

HIPPS codes can be downloaded from the CMS website Prospective Payment Systems page (reference: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ProspectivePaymentSystems/HIPPSCodes.html>).

1057 = Micromark Tissue Marker (eff. 1/2001)

COMMENT: The APC field is populated for those claims that are required to process through outpatient PPS Pricer.

The type of bills (TOB) required to process through are: 12X, 13X, 14X (except Maryland providers, Indian Health Providers, hospitals located in American Samoa, Guam and Saipan and Critical Access Hospitals (CAH)); 76X; 75X and 34X if certain HCPCS are on the bill; and any outpatient type of bill with a condition code '07' and certain HCPCS. These claim types could have lines that are not required to price under OPPS rules so those lines would not have data in this field.

REV_CNTR_BLOOD_DDCTBL_AMT

LABEL: Revenue Center Blood Deductible Amount

DESCRIPTION: This variable is the dollar amount the beneficiary is responsible for related to the deductible for blood products that appear on the revenue center record.

A deductible amount applies to the first 3 pints of blood (or equivalent units; applies only to whole blood or packed red cells — not platelets, fibrinogen, plasma, etc. which are considered biologicals). However, blood processing is not subject to a deductible. Calculation of the deductible amount considers both Part A and Part B claims combined. The blood deductible does not count toward meeting the inpatient hospital deductible or any other applicable deductible and coinsurance amounts for which the patient is responsible.

REV_CNTR_COINSRNC_WGE_ADJSTD_C

LABEL: Revenue Center Coinsurance/Wage Adjusted Coinsurance Amount

DESCRIPTION: This variable is the beneficiary's liability for coinsurance for the revenue center record.

Beneficiaries only face coinsurance once they have satisfied Part B's annual deductible, which applies to both institutional (e.g., HOP) and non-institutional (e.g., carrier and DME) services.

For most Part B services, coinsurance equals 20 percent of the allowed amount.

The coinsurance amount is wage adjusted, based on the metropolitan statistical area (MSA) where the provider is located.

This field will have either a zero (for services for which coinsurance is not applicable), a regular coinsurance amount (calculated on either charges or a fee schedule) or if subject to OP PPS the national coinsurance amount will be wage adjusted. The wage adjusted coinsurance is based on the MSA where the provider is located or assigned as a result of a reclassification.

The type of bills (TOB) required to process through are: 12X, 13X, 14X (except Maryland providers, Indian Health Providers, hospitals located in American Samoa, Guam and Saipan and Critical Access Hospitals [CAH]); 76X; 75X and 34X if certain HCPCS are on the bill; and any outpatient type of bill with a condition code '07' and certain HCPCS. These claim types could have lines that are not required to price under OPPS rules so those lines would not have data in this field.

Additional exception: Virgin Island hospitals and hospitals that furnish only inpatient Part B services with dates of service 1/1/2002 and forward.

Additional information regarding claim versus revenue-line level payments can be found in a CCW Technical Guidance document entitled: "Getting Started with Medicare Administrative Data."

REV_CNTR_RATE_AMT

LABEL: Revenue Center Rate Amount

DESCRIPTION: Charges relating to unit cost associated with the revenue center code.

SHORT NAME: REV_RATE

LONG NAME: REV_CNTR_RATE_AMT

TYPE: NUM

LENGTH: 12

SOURCE: NCH

VALUES: —

COMMENT: For SNF PPS claims (when revenue center code equals '0022'), CMS has developed a SNF PRICER to compute the rate based on the provider supplied coding for the MDS RUGS III group and assessment type (HIPPS code, stored in revenue center HCPCS code field).

For OP PPS claims, CMS has developed a PRICER to compute the rate based on the Ambulatory Payment Classification (APC), discount factor, units of service and the wage index.

Under HH PPS (when revenue center code equals '0023'), CMS has developed a HHA PRICER to compute the rate. On the RAP, the rate is determined using the case mix weight associated with the HIPPS code, adjusting it for the wage index for the beneficiary's site of service, then multiplying the result by 60% or 50%, depending on whether or not the RAP is for a first episode.

On the final claim, the HIPPS code could change the payment if the therapy threshold is not met, or partial episode payment (PEP) adjustment or a significant change in condition (SCIC) adjustment.

In cases of SCICs, there will be more than one '0023' revenue center line, each representing the payment made at each case-mix level.

For IRF PPS claims (when revenue center code equals '0024'), CMS has developed a PRICER to compute the rate based on the HIPPS/CMG (HIPPS code, stored in revenue center HCPCS code field).

Exception (encounter data only): If plan (e.g., MCO) does not know the actual rate for the accommodations, \$1 will be reported in the field.

REV_CNTR_STUS_IND_CD

LABEL: Revenue Center Status Indicator Code

DESCRIPTION: This variable indicates how the service listed on the revenue center record was priced for payment purposes.

The revenue center status indicator code is most useful with outpatient hospital claims, where multiple methods may be used to determine the payment amount for the various revenue center records on the claim (for example, some lines may be bundled into an APC and paid under the outpatient PPS, while other lines may be paid under other fee schedules).

	Y = Non-implantable DME (e.g., therapeutic shoes; not paid under OPPS — bill to DMERC)
	Z = Valid revenue with blank HCPCS and no other SI assigned (terminated)

COMMENT: This 2-byte indicator was added 10/2005 due to an expansion of a field that currently exist on the revenue center trailer. The status indicator is currently the 1st position of the Revenue Center Payment Method Indicator Code. The payment method indicator code is being split into two 2-byte fields (payment indicator and status indicator). The expanded payment indicator will continue to be stored in the existing payment method indicator field. The split of the current payment method indicator field is due to the expansion of both pieces of data from 1-byte to 2-bytes.

This field is populated for those claims that are required to process through outpatient PPS PRICER software. COMMENT: This field appears on both the revenue center and base claim files.

CMS has determined that dual provider identifiers (old legacy numbers and new NPI) must be available in the NCH. After the 5/2007 NPI implementation, the standard system maintainers will add the legacy number to the claim when it is adjudicated. We will continue to receive the OSCAR provider number and any currently issued UPINs. Effective May 2007, no new UPINs (legacy numbers) will be generated for new physicians (Part B and outpatient claims), so there will only be NPIs sent into the NCH for those physicians.
